Performance Benchmark	: Nil – The Fund does not have a performance benchmark assigned.
Distribution Policy	: Subject to the availability of income, distribution of income will be on a quarterly basis.
Fund Size	: 24.38 million units

FUND PERFORMANCE
For The Financial Period From 1 January 2023 To 31 March 2023

Market And Fund Review
Review Of The Lion Capital Funds II – Lion-Bank Of Singapore Emerging Market Bond Fund (Target Fund Of BOSWM Emerging Market Bond Fund)

<u>January 2023</u>
US Treasury yields ended January lower at 3.3% versus 3.9% at the end of 2022. Core US inflation seems to have peaked and we expect the Fed to slow its pace of interest rate hikes to 25 basis points (bps) this year, moderating from the 50bps and 75bps rapid moves last year. Global credit markets performed well in line with other risk assets as markets assessed likelihood of a soft landing with inflation under control. Monthly returns were +4.2% for JPM CEMBI HY (EM HY), +2.5% for JPM CEMBI IG (EM IG) and +4.8% for Bloomberg Barclays US (DM IG). Bank of Singapore's 12-month forecast for 10Y US Treasury yields is 3.5%. The US Federal Reserve (Fed) is likely to lift Fed Funds rate by 25bps in March and May to 5.00-5.25% and then keep interest rates unchanged in 2023.

Despite widespread expectations of an impending recession, risk assets rallied into 2023 on expectations of a Fed pivot as inflation showed signs of cooling. The start of the year saw broad based improvements in sentiment across credit markets with reasonably stronger technicals.

Performance across geographies were generally positive and longer duration credits outperformed for EM |G. Greater China greatly benefitted from the Covid-19 reopening theme alongside supportive macro policies targeting economic growth and the property sector. In EM HY, China property credits continue to rally in January following the targeted measures announced by the government last year. The landscape for the sector appears mixed going forward given that home sales have yet to improve materially. Other EM HY segments also saw broad-based rally at the start of 2023, given the stronger technicals and improved market sentiment around the Fed hiking cycle.

Fixed Income now offers more balanced risk-reward after the significant market re-pricing seen last year. Current yields look attractive relative to historical levels, especially for higher quality credits. Credit dispersion should remain a theme for 2023 given the feed through of higher rates and growth uncertainty. We look to position in fundamentally sound companies that could navigate this environment, with well managed capital structures and solid business positioning within their respective sectors. We are cautious on credit risks particularly in companies which rely on low borrowing costs for many years. As the Fed slows down its hiking cycle, we favour duration. Overall, we are sanguine on EM and remain weighted in HY as the current yield environment offers compelling total return opportunities for bond investors through active duration management and rigorous bottom up credit selection.

The Fund continued to stay invested into the new year, maintaining the prudent investment approach to selective rebalance into quality and diversity.

February 2023
US Treasury (UST) yields ended February 2023 higher at 3.9% vs 3.5% at the end of January 2023. Recent key US data were surprisingly strong showing the economy has not cooled enough yet to return inflation to the Federal Reserve (Fed) 2% target despite last year's aggressive interest rate hikes. Global credit returns were broadly weaker with higher UST rates and softer sentiments for risk assets. Monthly returns were 2.0% for JPM CEMBI HY (EM HY), 1.5% for JPM CEMBI IG (EM IG) and 3.9% for Bloomberg Barclays US (DM IG). Bank of Singapore's 12-month forecast for 10-Year UST yields is 3.5% as the US Fed rate hikes slow the economy and push long term yields lower during 2023. The Fed will likely lift interest rates by 25 basis points (bps) in March 2023 and May 2023, and we now expect a 25bps hike in June 2023 too.

The overall investment grade market saw broad-based weakness from technicals and a reversal of January 2023 optimism on a Fed pivot. Latin America underperformed partly due to the relatively longer duration and idiosyncratic events. Volatility in the Brazil and Mexico corporate bond market has been on the rise while Asia witnessed generally better performance related to China's reopening. In high yield, performance was mixed and overall impacted by weak technicals as sentiment turned more negative during the month. The China property sector held up well as supportive news in terms of top down policies continue to dominate headlines. Idiosyncratic credit events such as those related to India credits and Brazil distressed situations weighed on sentiments.

The current macro environment remains potentially volatile in the near term and could encompass further credit dispersion. We advocate a diversified approach with a focus on bottoms up fundamentals and a quality tilt. Certain sectors and countries are more well-positioned to navigate the current cycle, volatile rates environment and growth uncertainty. Overall, we favour duration via EMIG bonds, which are recession hedges and maintain preference for quality credits in EMHY with good carry. We continue to watch key economic data that may shift the Fed's balancing act of managing inflation and growth. The Fund continues to maintain the prudent investment approach to selective rebalance into quality and diversity as we adapt to a slower economic backdrop and potentially less inflationary conditions.

March 2023
US Treasury (UST) yields dropped significantly in March 2023 with the UST 10-Year rate moving from 3.92% to 3.47%. Global markets became concerned with the possibility of a banking crisis and financial contagion as Silicon Valley Bank, First Republic Bank and Credit Suisse Group ran into troubles. Global credit markets had a mixed performance as markets assessed the increased likelihood of a recession with banks likely to tighten up lending after recent troubles. March 2023 returns were 0.4% for JPM CEMBI High Yield (EM HY), +1.4% for JPM CEMBI Investment Grade (EM IG) and +3.5% for Bloomberg Barclays US (DM IG). Bank of Singapore's 12-month forecast for 10-Year UST yields is 3.25%, down from the previous 3.5%. The US Federal Reserve (Fed) is likely to hike another 25 basis points in the May 2023 meeting, while pausing for the rest of 2023 to see how economic data pans out.

EM IG bonds registered positive returns across geographies as rates expectations were diminished by the possibility of a US bank crisis and financial contagion. Lower rates were partially offset by IG spreads widening as investors become concerned about the impact of a recession on EM countries. Sector-wise, Financials underperformed as Swiss authorities ruled that Credit Suisse's Additional Tier (AT) 1 debt would be fully written own before equity, in an unprecedented move to rescue the beleaguered Credit Suisse and forcing a marriage with UBS. On the other hand, EM HY performance was mixed and overall impacted by weak technical's as sentiments turned more negative during the month. Riskier AT1 and T2 bank debt sold off as markets repriced the risk of owning these bonds, while the China property sector retreated after a strong start this year. We are broadly neutral on EM IG bonds as valuations are moderately balanced against the backdrop of fairly healthy fundamentals, whilst preferring EM HY bonds with focus on stronger issuers.

Credit dispersion should remain a theme for 2023 given the feed through of higher rates and growth uncertainty. We look to position in fundamentally sound companies that could navigate this environment, with well-managed capital structures and solid business positioning within their respective sectors. We are cautious on credit risks particularly in companies which relied on low borrowing costs. Despite the volatile market conditions, we remain committed to our philosophy of focusing on long-term value. As the Fed rate hike cycle slows, we favour duration. 10-Year UST yields have likely reached a zone where value could emerge for long-term investors with patience. The Fund continues to maintain the prudent investment approach to selective rebalance into quality and diversity ahead of a slower economic backdrop and potentially less inflationary conditions.
